PROFILE SUMMERY

Backend-focused Software Engineer with experience building scalable microservices, AI-powered systems, and real-time applications using **Python, Django, PostgreSQL, Kafka, Redis**, and **AWS**. Worked on production-grade backend systems involving authentication, asynchronous processing, alert workflows, document ingestion, and RAG-based pipelines.

SKILLS

Backend: Python | Django | Django REST Framework | PostgreSQL | Redis | Kafka | Celery | JWT

Frontend: React | Next.js | TypeScript | Redux | Tailwind CSS | JavaScript

Cloud & DevOps: Docker | Kubernetes | AWS (EC2, RDS, S3, SES) | GitHub Actions | CI/CD

Tools & Systems: Git | Postman | REST APIs | Microservices | Linux

EXPERIENCE

Backend Engineer

Codemonk

Oct 2025 – Present

Bangalore

- Built scalable backend services using **Django** and **Django REST Framework** for AI-powered and analytics-driven platforms.
- Developed REST APIs, authentication workflows, and background task systems using **Celery**, **Redis**, and **PostgreSQL**.
- Integrated AWS services including **S3**, **SES**, **SNS**, **Cognito**, and **Secrets Manager**.
- Worked on AI/RAG-based systems involving prompt management, embedding workflows, and document ingestion pipelines.
- Implemented asynchronous processing and alert workflows using **Kafka** and Celery.
- Built Excel export/reporting systems using **OpenPyXL** for operational analytics dashboards.
- Optimized database queries and API performance for production workloads.

Full Stack Developer

Hushed Innovations

Dec 2024 – Oct 2025

Cochin

- Delivered full-stack web applications across e-commerce, media, and business domains using Django and React.
- Built secure authentication systems, payment integrations, and RESTful APIs for client projects.
- Implemented responsive frontend interfaces and optimized backend workflows for scalability and performance.

PROJECTS

Image Analytics — AI-Powered Industrial Safety Platform

Live

Backend & Edge AI Video Processing

Django, DRF, PostgreSQL, Celery, AWS

- Architected a **multi-tenant safety platform** backend across **16 Django apps** serving as the control plane for industrial sites — managing site/block/camera hierarchies, **RBAC** with site-scoped visibility, and a soft-disable cascade across the entire device tree.
- Built the **alert ingestion pipeline** where edge servers POST ML detections (PPE, fire, intrusion, fall — **15 use-case types**) with S3-backed images, triggering async **Celery** notifications via **AWS SES** email and **SNS** SMS based on a per-site/use-case notification matrix.
- Developed a **FastAPI edge agent** that orchestrates a GPU inference container via the **Docker SDK**, polls the Django API for config diffs, and bridges detections to the backend through filesystem-based staging directories on a shared **/data** volume — replacing the need for a message broker.
- Implemented an **inference service** running **20+ detection modules** using YOLOv7, Triton, ONNX Runtime, and FAISS with privacy-first face blurring at the edge.
- Designed **device health monitoring** with Celery Beat polling, automated offline alerts via **MS Teams** webhooks, and async dashboard analytics with **Excel report** exports.
- Secured the platform using **AWS Cognito**, **KMS** + **AES-GCM** encryption, CSP headers, **django-structlog**, and **django-auditlog** for centralized logging and audit trails.

Fleet Management — Vehicle Rental SaaS Platform

Live

Multi-Tenant Car Rental SaaS Backend

Django, DRF, PostgreSQL, Redis, Celery, GCS

- Architected a **multi-tenant SaaS** car rental platform with **database-per-tenant** isolation using custom middleware, a dynamic DB router, and async tenant provisioning via **Celery**.
- Built a **Django REST Framework** API across **22 domain apps** following a layered **clean architecture** (control / usecases / repository / domain) serving React and Flutter clients.
- Implemented end-to-end rental workflows—reservations, multi-stage contracts, inspections, payments, and settlements—with **RBAC** authorization and **JWT** authentication.
- Designed a scoped **mobile API surface** (/api/v1/mobile/) with **GCS signed URL** photo uploads for pre/post-rental vehicle inspections in the field.
- Integrated **Saudi compliance** features including **ZATCA** e-invoicing (TLV QR codes) and TAMM/NAQL tracking on rental contracts.
- Improved performance and reliability using **Redis** caching, **Celery** background tasks, unified API error envelopes, and **drf-spectacular** OpenAPI documentation for web and mobile.

EDUCATION

Brototype

2023 – 2024

Web development

Bangalore, India

Mahatma Gandhi University

2020 – 2023

Bachelor of Arts in Economics

Cochin, India

SELF DECLARATION

I hereby declare that the above information is true and correct to the best of my knowledge.
